

LumaGrip™

at the Lion Bar & Club, Walsall

LumaGrip™ recently completed the installation of their innovative anti-slip illuminated nosing inserts in the Lion Bar & Club, Walsall near Birmingham. The product was fitted around the club, providing easy to see illuminated edges to all potential trip hazard areas, complying with Health and Safety regulations.

This particular project highlighted the need for more defined edging to indicate not only stairs but also smaller changes in floor level from one area to another in and around the bar, and surrounding the recessed dance floor. These areas were essentially laid out over three levels in all, so providing a challenge when the house lighting was subdued and the dance lighting in use.

LumaGrip™ incorporates the Light Tape electroluminescent lighting product into its design which also makes the lighting system extremely economical to run. These inserts have been developed to fit into standard Aluminum profiles, timber stairs and decking.
