

Film - Tron the Legacy

Light Tape® is used extensively in the up and coming Tron movie, set for general release December 2010. The Light Tape® product features on the Light Cycle, and various costumes used in the live action sequences to great effect. As you can see from the picture of the Light Cycle above the end result is spectacular and truly in keeping with the futuristic theme. In this case, the use of Light Tape®, to trim the cycle, has created a clean, bright, sharp, strong and continual lighting effect that also suggests a true fluidity and flow in the light design on the central body of the cycle. That same uninterrupted light, when used around the wheel trim, even when stood, screams action, excitement and anticipation. All of which adds up to the perfect super hero vehicle.
